

THE LIVING WORLD

1. The number of species that are known and described ranges between :
(1) 1-2 million (2) 1.7 - 1.8 billion
(3) 1.7 - 1.8 million (4) 7 million
2. Grouping of any thing into convenient categories based on some easily observable characters called:
(1) Nomenclature (2) Identification
(3) Classification (4) Taxonomy
3. Branch of biology, which deals with study of evolutionary relationship between organism :-
(1) Plant anatomy (2) Systematics
(3) Ecology (4) Physiology
4. In taxonomic hierarchy plant families are characterised by
(1) Only vegetative features of plant species
(2) Genetic features of plant species
(3) Both vegetative and floral features of plant species
(4) Neither vegetative nor floral features of plant species
5. In botanical gardens various plant species are grown for which purpose?
(1) Identification
(2) Nomenclature
(3) Classification
(4) Both 2 and 3
6. Taxonomical aid which contain actual account of habitat and distribution of plants of a given area :
(1) Flora (2) Fauna
(3) Manual (4) Monograph
7. The taxonomic aid, which is useful in providing information for identification of names of species found in an area, called :
(1) Flora (2) Museum
(3) Manual (4) Monograph
8. Monographs are concerned with :
(1) Information of any species only
(2) Information of any genus only
(3) Information of any family only
(4) Information of any one taxon
9. ICZN is used for
(1) Virus
(2) Bacteria
(3) Cultivated plants
(4) Animals
10. Plant *Ocimum sanctum* belongs to kingdom plantae. As per taxonomic terminology term kingdom and plantae are respectively :
(1) taxon and category
(2) category and taxon
(3) taxon and division
(4) taxonomy and systematics
