

PERIODIC TABLE

1. The elements which forms the bridge between active metals of s-block & least reactive metals of group 13 & 14 are known as
 (1) Typical elements (2) bridge elements
 (3) Normal elements (4) Transition elements
2. The study of actinoid is more complicated than lanthanoid. due to
 (1) Most of the actinoids are present in nature for few seconds
 (2) The Quantity of actinoids is obtained in nanograms
 (3) Actionoids show more no. of oxidation states than Lanthanoids
 (4) All of the above
3. Reactivity of elements in the period on moving from left to right
 (1) Decreases
 (2) increases
 (3) First decreases then increases
 (4) First increases then decreases
4. Reactivity of s-block metals increases on moving down the group. What about halogen's reactivity on moving down the group
 (1) Increases
 (2) Decreases
 (3) First Increases then decreases
 (4) First decreases then increases
5. The model to classify the elements proposed by the scientists before the discovery of electron : were based on.
 (1) Atomic number (2) Number of Nucleons
 (3) Isotopes (4) Atomic volume
6. The name of the element having atomic no. 104 is/are
 (1) Rutherfordium (2) Unnilquadium
 (3) Kurchatovium (4) All of the above
7. The number of elements present in each period is equal to :-
 (1) Twice the atomic orbitals available in the energy level in which electron is filled.
 (2) Number of atomic orbitals available in energy level.
 (3) $2n^2$
 (4) None of the above
8. In which of the following species all the atomic orbitals are fully filled according to Aufbau's principle
 (1) Cu^+ (2) Zn^{+2}
 (3) Kr (4) All of the above
9. Select the group in which the two species have same value of radius.
 (1) Cl^{35} , Cl^{37} (2) Zr, Hf
 (3) Al, Ga (4) All of the above
10. The size of following species is affected by
 H^1 D^2 T^3
 (1) Nuclear charge & atomic mass
 (2) Valence shell principal quantum number
 (3) Electron electron interaction
 (4) None of the factors because their size is same
11. Which of the following statement is correct
 (1) I.P_1 of Mg < I.P_1 of Al
 (2) I.P_3 of Mg > I.P_2 of Na
 (3) I.P_1 of Mg > I.P_2 of Na
 (4) I.P_2 of Mg > I.P_2 of Al
12. In Lithium 2s electron experience the force of attraction exerted by nucleus
 (1) equal to the actual charge of +3
 (2) more than the actual charge of +3
 (3) less than the actual charge of +3
 (4) Can't be predicted
13. Which of the following is not a measurable quantity?
 (1) Ionization potential
 (2) Atomic radii
 (3) Electron Affinity
 (4) Electronegativity
14. An element 'A' has 3 electron in outermost shell and 'B' has 6 electron in outermost shell. Formula of the compound formed by the combination of these two.
 (1) A_2B_3 (2) A_3B_2
 (3) A_6B_3 (4) A_2B
15. Valency of which of the following element is not equal to the valence electron
 (1) Na (2) Mg
 (3) C (4) O

- 16.** Which of the following configuration has minimum 1st I.P. ?
- (1) $1s^2 2s^1$ (2) $1s^2 2s^2 2p^2$
(3) $_{36}[\text{Kr}] 4d^{10} 5s^2 5p^5$ (4) $_{54}[\text{Xe}] 4f^{14} 5d^{10} 6s^2 6p^5$
- 17.** Which of the following configuration has maximum value of E.A. ?
- (1) $1s^2 2s^2 2p^4$ (2) $1s^2, 2s^1$
(3) $_{36}[\text{Kr}] 4d^{10} 5s^1$ (4) $1s^2 2s^2 2p^6 3s^2 3p^4$
- 18.** Correct increasing order of acidic character is :-
- (1) $\text{Al}_2\text{O}_3 < \text{MgO} < \text{Na}_2\text{O} < \text{Cs}_2\text{O}$
(2) $\text{Cs}_2\text{O} < \text{Na}_2\text{O} < \text{MgO} < \text{Al}_2\text{O}_3$
(3) $\text{Na}_2\text{O} < \text{MgO} < \text{Al}_2\text{O}_3 < \text{Ca}_2\text{O}$
(4) None of these
- 19.** Which of the following configuration belongs to s-block elements ?
- (1) $1s^2 2s^2 2p^6 3s^2 3p^6 3d^{10} 4s^1$
(2) $1s^2 2s^2 2p^6 3s^2 3p^6 4s^1$
(3) both (1) and (2)
(4) None of the above
